A Appendix – full screen boards

01 Summary & scope

What this document covers and what is changing

Why

The current Oncare Plus app covers login, home, documents, appointments, booking, profile and SOS. It works end to end, but it looks like a generic template, the booking flow is long, and it offers nothing beyond appointments. Patients cannot ask for home care, medicines, a second opinion or admission help from the app.

Goals

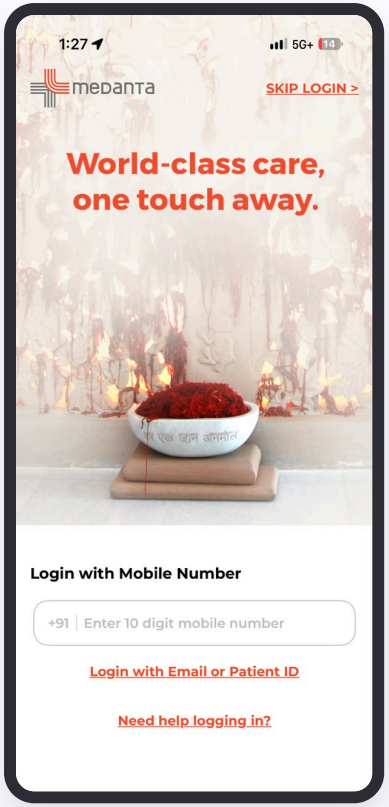

- Add **Home Care** (lab sample, medicines, nursing, palliative), **Second Opinion** and **Admission & Day-care** requests. Each creates a ticket on the **Central Ops Dashboard**.
- Rebuild **booking**, **appointments**, **records** and **profile** with a premium healthcare look.
- Add a **guest mode**: browse doctors, centres and approximate test and medicine prices without login.
- Show **SOS** on every screen without covering any buttons.
- Let patients **track every request** with a live status, plus WhatsApp updates.

What changes, at a glance

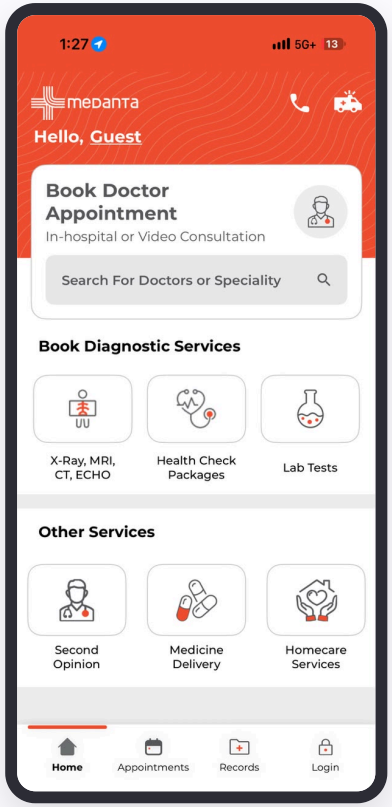

Area	Existing	New
Login	Mobile / UID + OTP	Same, plus guest mode, family-member picker, SMS fallback
Home	Personal details only	Booking card, next step, 6 care services
Booking	Location → Doctor → Type → Slot	4 steps with progress bar, city tabs, nearest centre, next free slot, video option
Appointments	Upcoming / Past list	Activity tab: appointments and requests, directions, book again
Documents	Flat list	Records: categories, search, upload, date grouping
Profile	Details, support, FAQ	Family, insurance, preferred centre, language, WhatsApp help
SOS	Floating button, covers UI	Pill in the top bar of every screen
Medicines	–	Upload Rx (AI adds to cart) or search & add → cart → delivery → request
Lab tests	–	Select tests or upload Rx (AI finds tests) → date/time → request
New	–	Home Care, Second Opinion, Admission, Request tracking

02 Reference: Medanta app

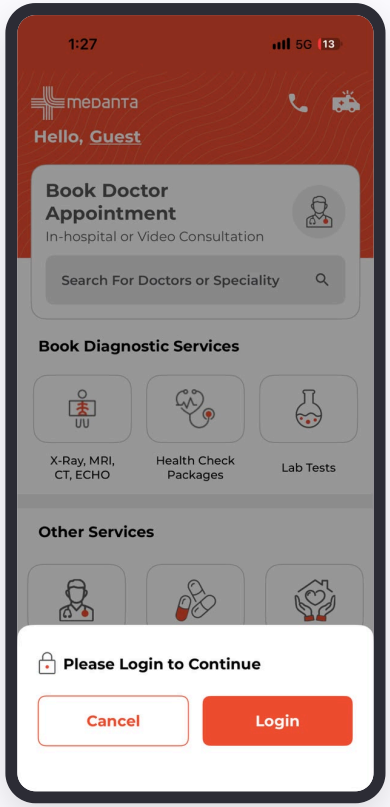

What we borrow, and where Oncare Plus goes further

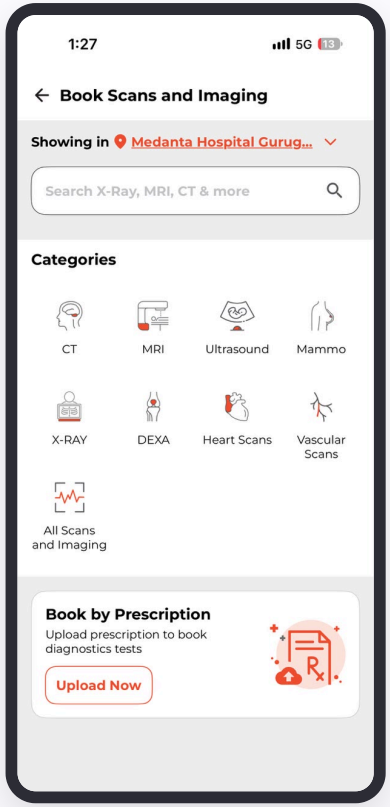

Login + Skip login

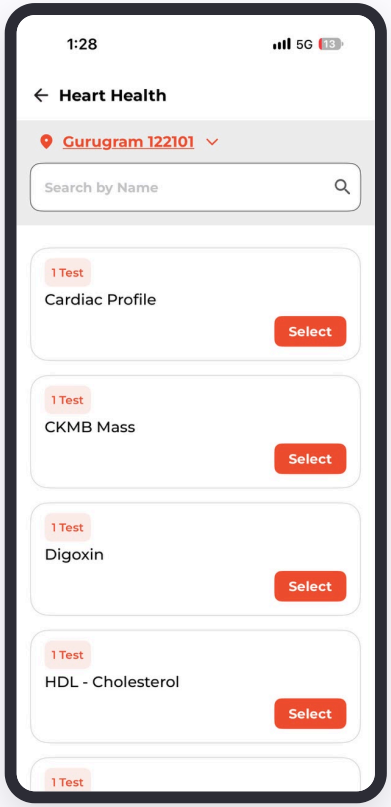

Home – services grid

Login asked on action

Scans – book by prescription

Lab tests by pincode

Borrowed

- Skip login; ask for login only when the patient takes an action
- Home grouped into booking + services
- Upload prescription: JPG/PNG/PDF, max 3 files, 10 MB each, plus a "valid prescription" checklist
- Location / pincode selector for lab tests and scans
- Call and emergency always in the header

Better in Oncare Plus

- **Status tracking** for every request (Medanta has none after submit)
- **Cancer-specific** services: tumour markers, day-care chemo, PICC/port care, palliative care, second opinion on biopsy/PET-CT
- **Approx. prices** visible to guests, with a clear note that actual pricing needs login and documents
- **WhatsApp** OTP and status updates
- Lighter, calmer UI in Oncare brand colours

03 Design system – Midnight Navy

Colours, type and components used on every screen

Midnight Blue
#20206B
Headers, primary buttons, nav bar, text

Deep Blue
#262F82
Header gradient, links

Medium Purple
#9966FF
Selected states, progress

Vivid Purple / Pink
#CC66FF
Glow, highlights, new badges

Pale Blue
#DFEDF6
Info cards

Off-white
#F8F7FC
Screen background

SOS Red
#E11D48
SOS only

Type

Use	Font	Size
Screen title	Montserrat SemiBold	17–21
Section heading	Montserrat SemiBold	15
Body	Montserrat Regular/Medium	12.5–13.5
Helper / labels	Montserrat Medium	11–12

Components

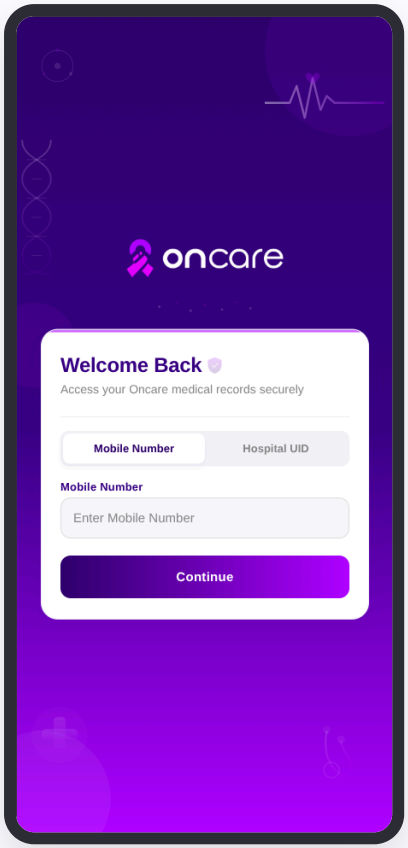

- **Header**: navy gradient with pink glow at top-right, rounded bottom (32 px)
- **Primary button**: navy pill; **secondary**: navy outline pill
- **Selected** chip / slot / date: violet-to-pink gradient
- **Cards**: white, 16–20 px radius, soft shadow
- **Bottom nav**: floating navy bar: Home · Activity · **Book (white +)** · Records · Profile

Rules

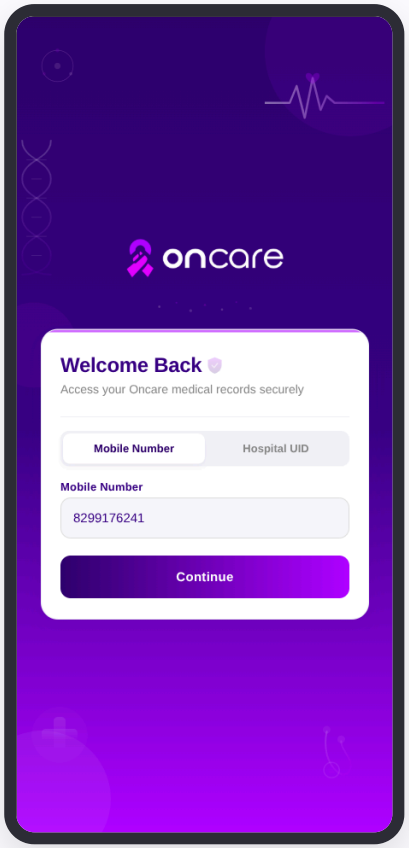

- Touch targets ≥ 44 px
- Text contrast ≥ 4.5:1
- Pink is an accent only, never for long text
- SOS pill: same place (top-right) on every screen
- Status colours: green = done, violet = in progress, amber = action needed, red = cancelled

04 Login & OTP

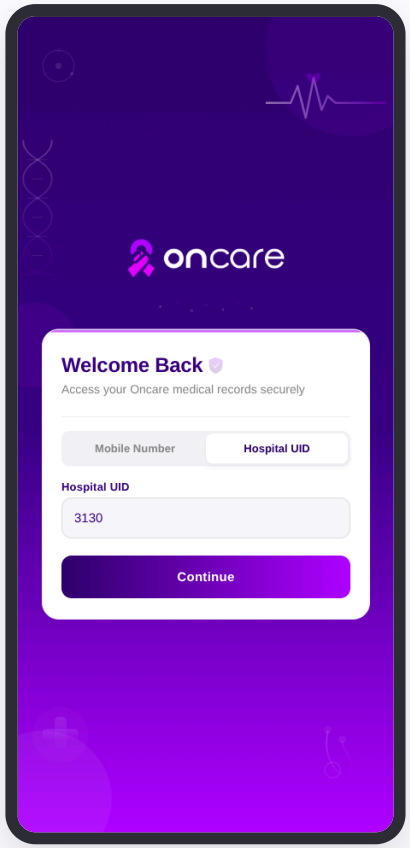

EXISTING APP

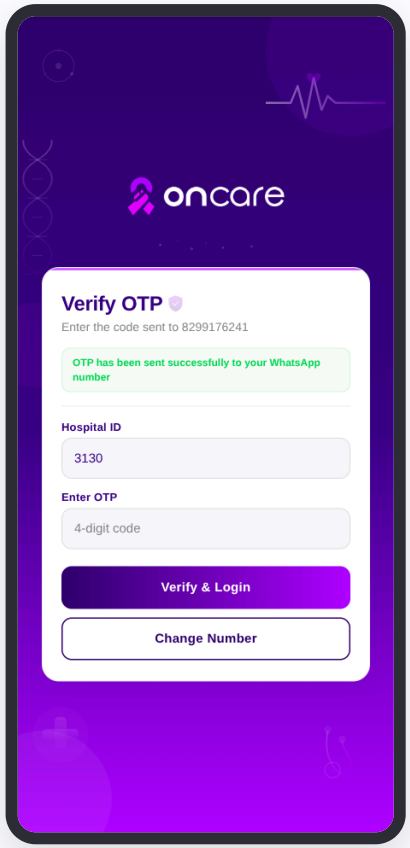

Login – empty

Mobile filled

Hospital UID

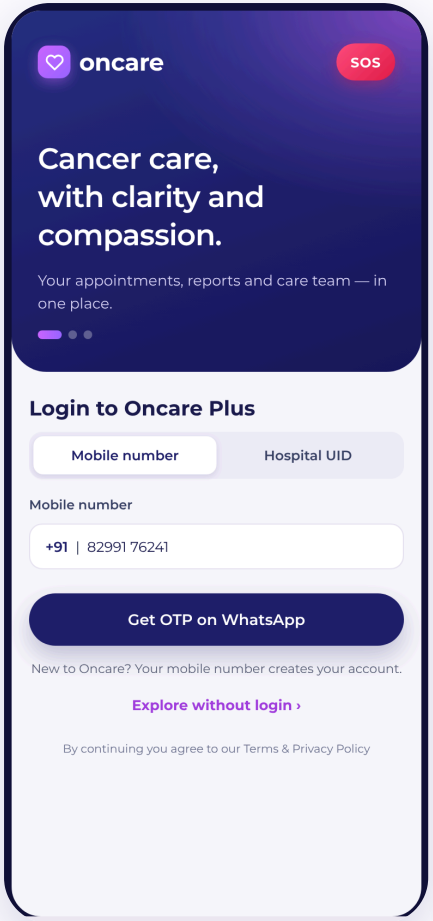

Verify OTP

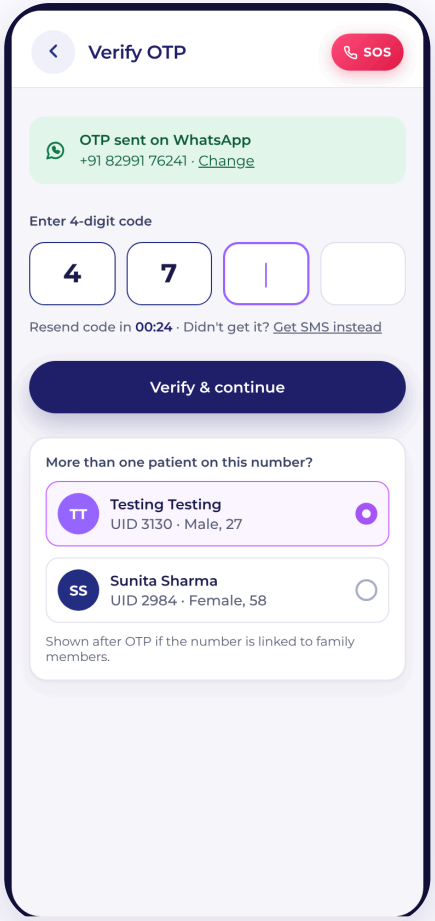

Observations

- Works: mobile / UID tabs, OTP on WhatsApp, Change Number
- A heavy purple gradient covers the whole screen; the card feels small
- No guest option, no SMS fallback, no resend timer
- No way to pick a family member when one number is linked to several patients
- Many console errors on these screens ("text node cannot be a child of <View>")

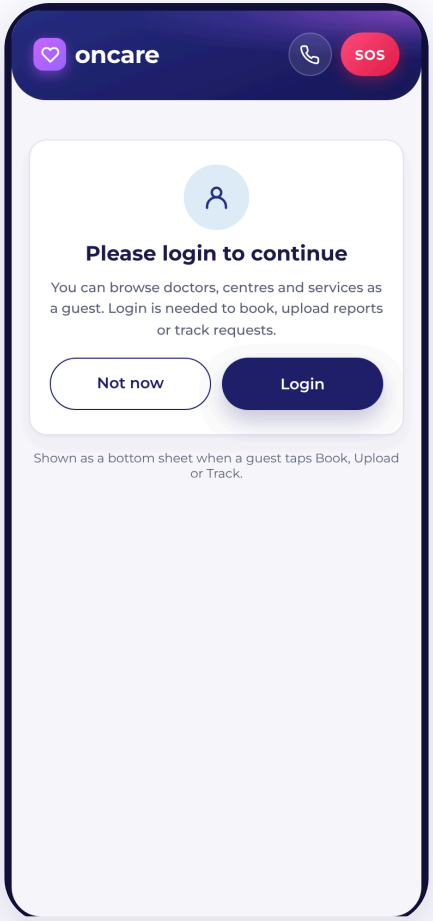

NEW DESIGN

A1 · Login – mobile or Hospital UID

A2 · OTP on WhatsApp + choose patient

A3 · Guest mode prompt

What changed

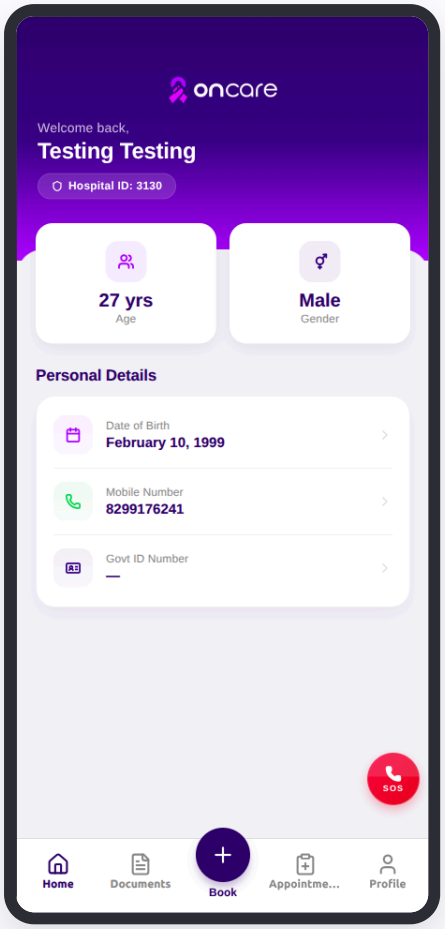

- Hero with brand line and SOS; login form below
- "Get OTP on WhatsApp", 4-digit OTP boxes, 30 s resend timer, "Get SMS instead"
- **Patient picker** after OTP if the number has more than one UID
- "Explore without login" opens guest mode (section 06)

Rules

Field	Rule
Mobile	10 digits, +91 fixed
Hospital UID	Numeric; OTP goes to the linked mobile
OTP	4 digits, valid 5 min, max 3 resends
New number	Account created after OTP; name, age, gender asked once
Session	Stay logged in until logout

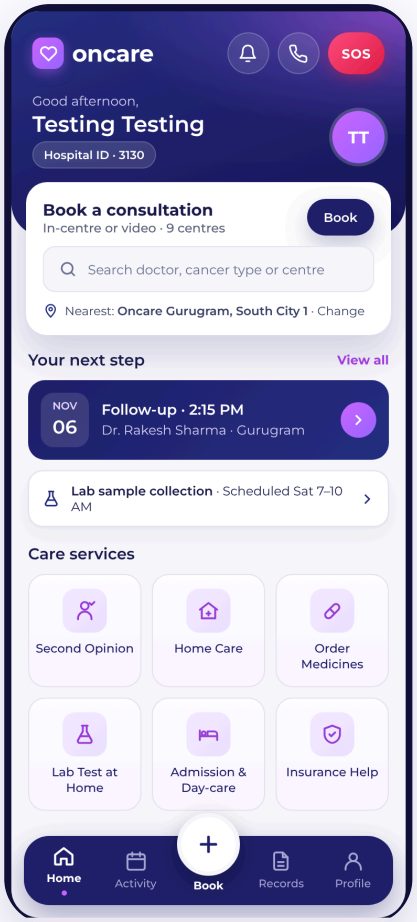

05 Home

EXISTING APP

Home – existing

NEW DESIGN

A4 · Home (logged in)

Existing

- Only name, age, gender and personal details
- No shortcut to booking, reports or services
- SOS floats over content

New

- Header: logo, notifications, call, **SOS**, greeting, Hospital ID
- **Book a consultation** card with search and "Nearest centre"
- **Your next step**: next appointment plus any active request
- **Care services**: Second Opinion · Home Care · Order Medicines · Lab Test at Home · Admission & Day-care · Insurance Help
- Floating navy nav with white Book button

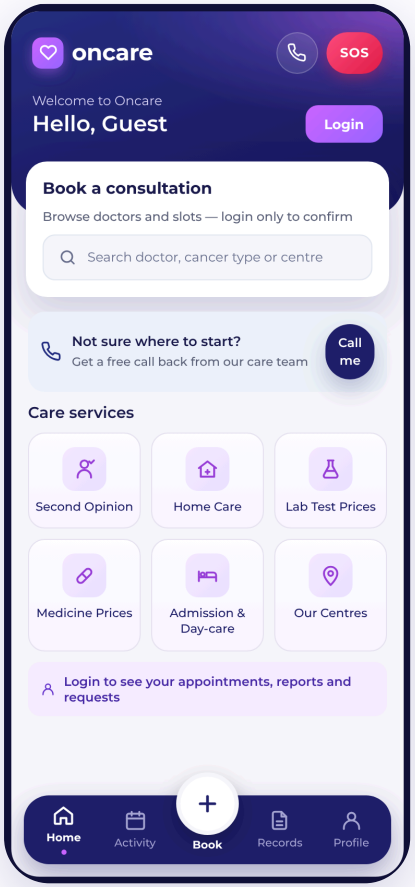

Data

- Nearest centre from location permission, else preferred centre
- Next step = earliest upcoming appointment or the latest open request

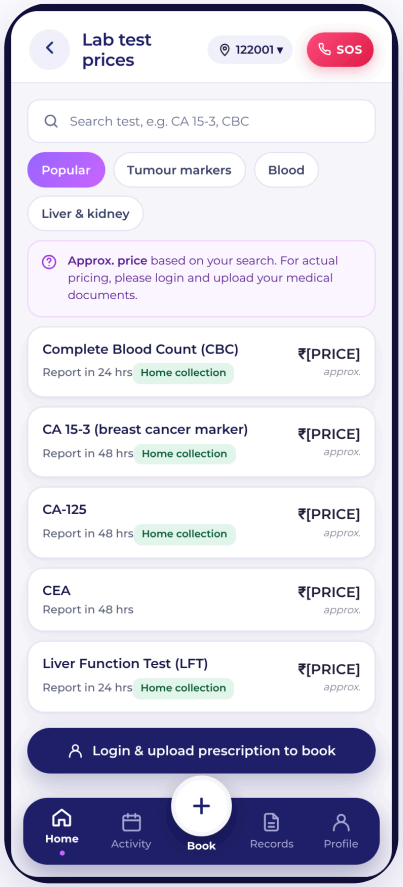

06 Guest mode & approx. prices

New – the app is useful before login

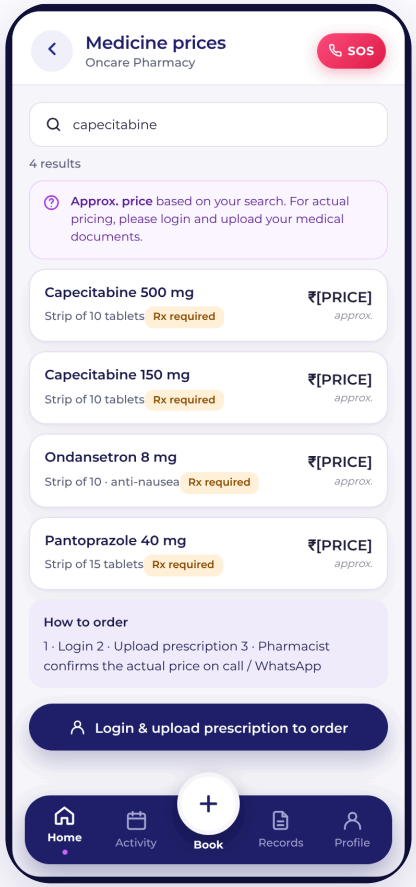

NEW DESIGN

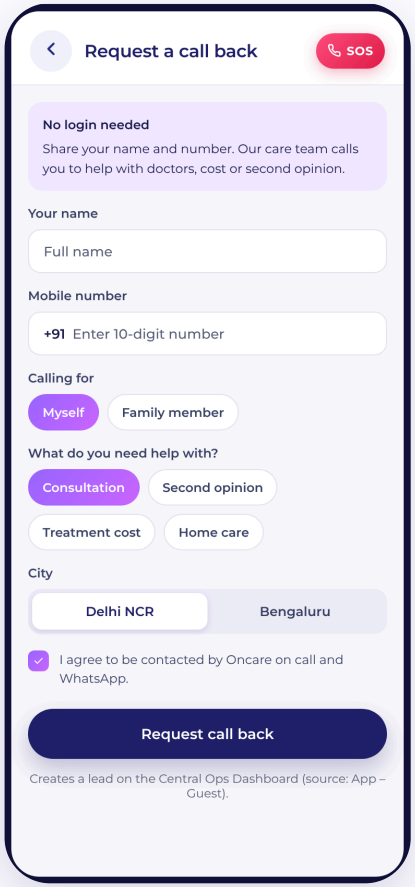

B1 · Guest home

B2 · Lab test prices (approx.)

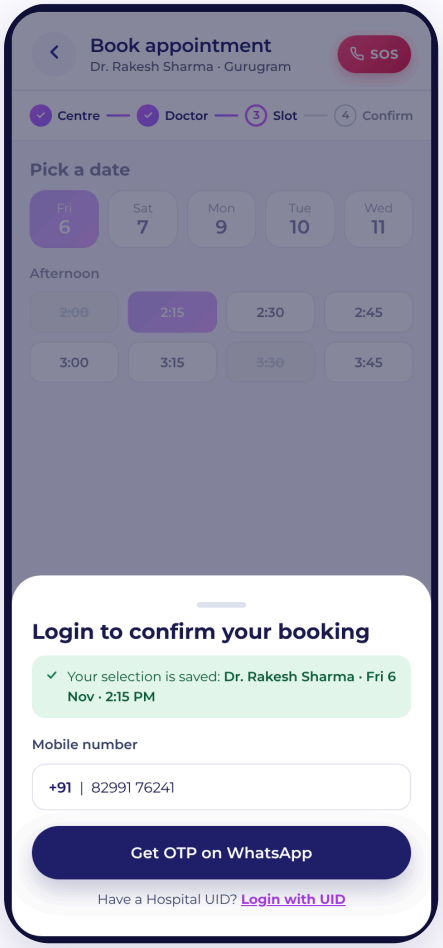

B3 · Medicine prices (approx.)

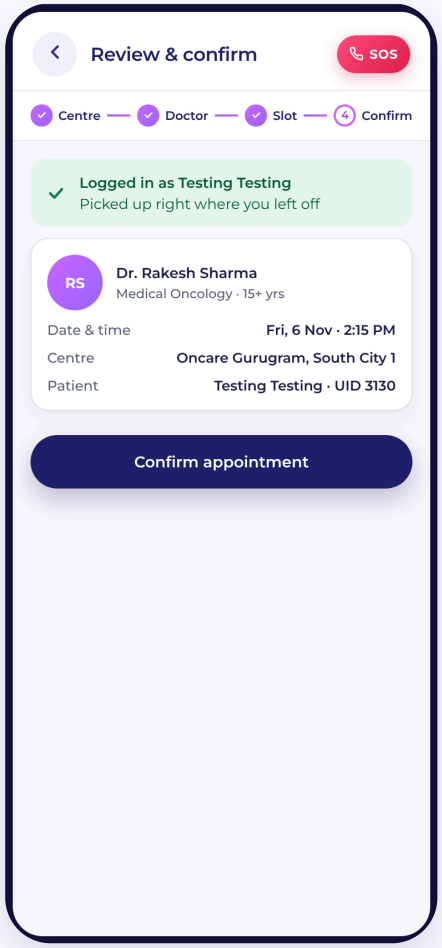

B4 · Request a call back

Price note (shown above every price list): "Approx. price based on your search. For actual pricing, please login and upload your medical documents." Each price also carries an "approx." label.

B5 · Locked action → login sheet

B6 · After OTP → back to same step

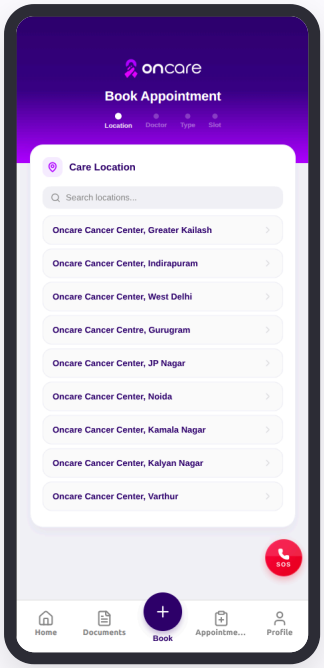

Guest can (no login)	Needs login (bottom sheet opens)
Browse centres, addresses, directions	Confirm a booking
Search doctors, view profiles, see free slots	Book a lab test / order medicines (+ prescription upload)
See **lab test prices (approx.)**	Home Care, Second Opinion, Admission
See **medicine prices (approx.)**	Activity, Records, Profile tabs
Request a call back (name + number)	Reschedule / cancel
SOS and call Oncare	Upload reports

How login is handled

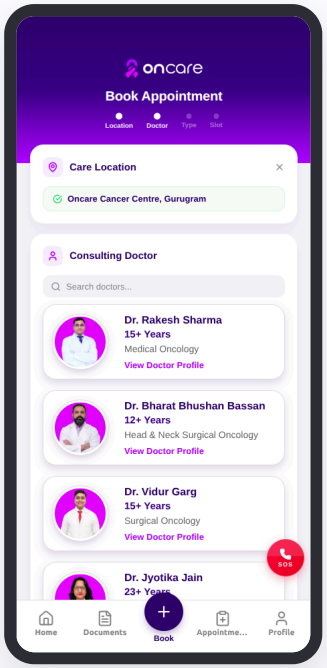

- A locked action opens a **login bottom sheet** on the same screen, not a new page
- The selection (doctor, slot, cart, form) is kept and shown as "Your selection is saved"
- After OTP the patient returns to the same step with fields filled in
- A call-back request creates a lead on the Ops Dashboard with source "App – Guest"

07 Book appointment

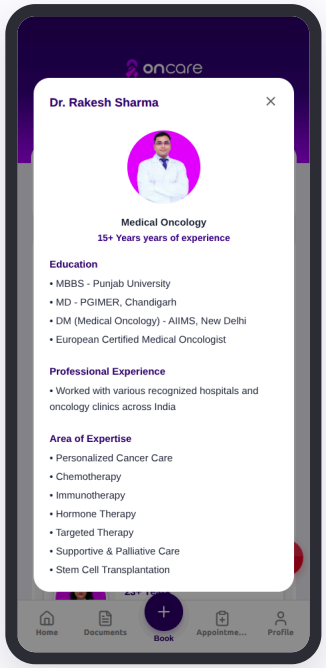

EXISTING APP

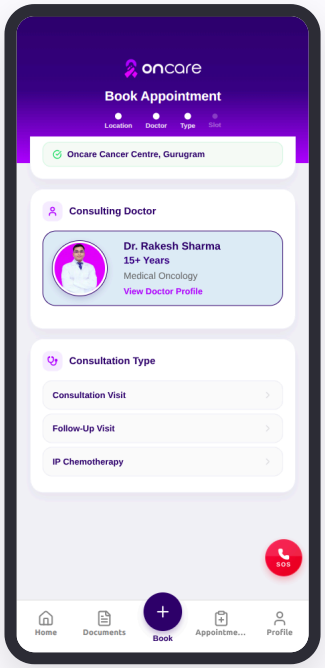

Location

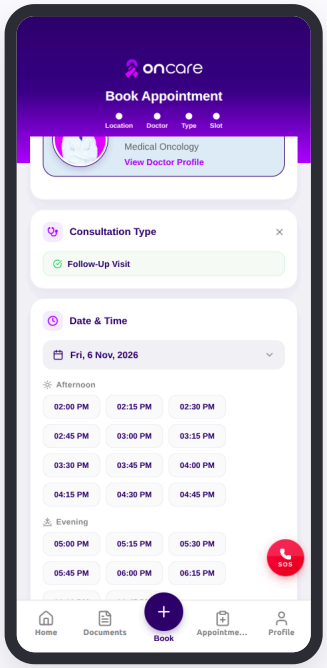

Doctor

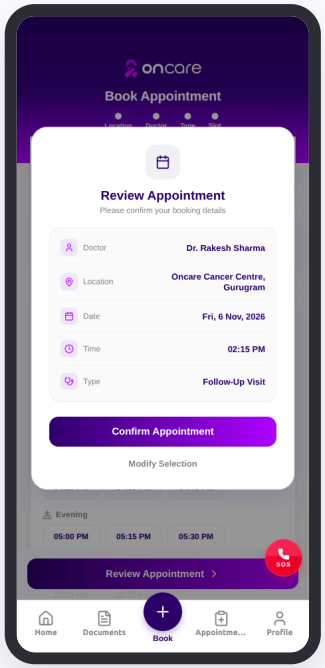

Doctor profile

Type

Date & slot

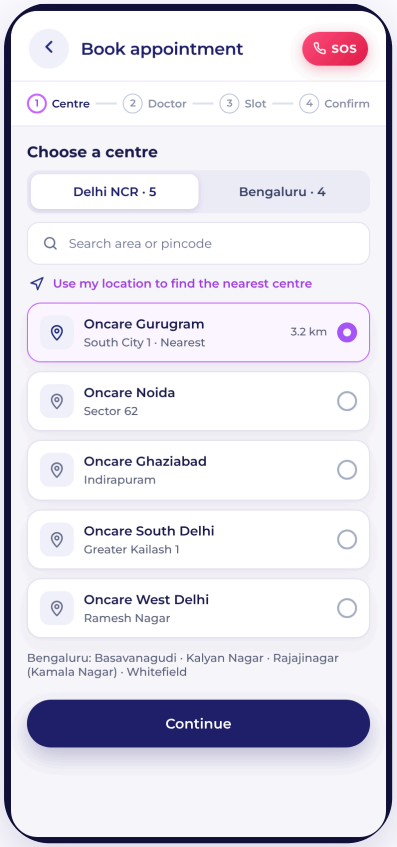

Review

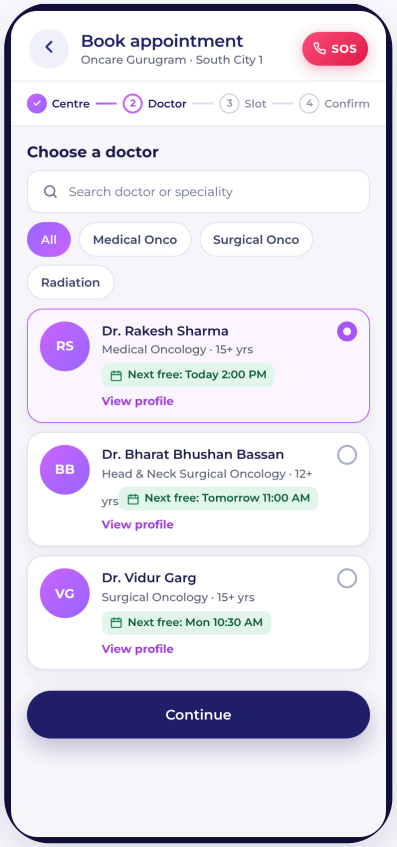

Observations

- Flow is right: Location → Doctor → Type → Slot → Review → Confirmed
- Location list mixes Delhi and Bengaluru with no city filter and no "nearest"
- Doctor cards show no next available slot; patients have to tap through
- Doctor popup repeats text: "15+ Years years of experience"
- Booked slots are not shown as unavailable; no video consultation option
- Floating SOS covers the "Review Appointment" button

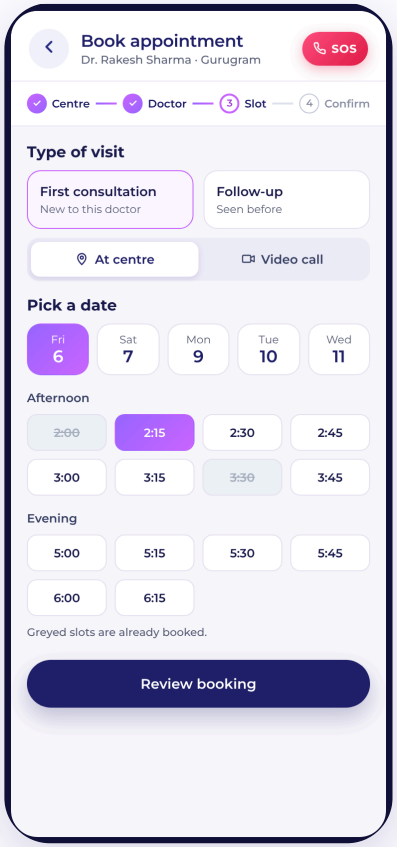

NEW DESIGN

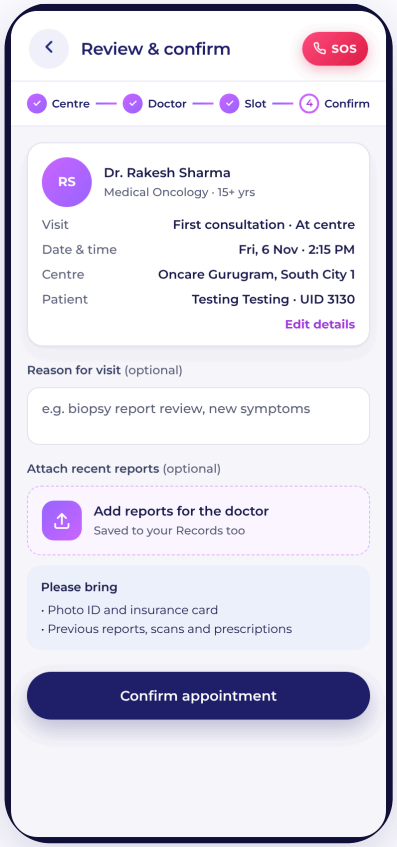

C1 · Choose centre (city + nearest)

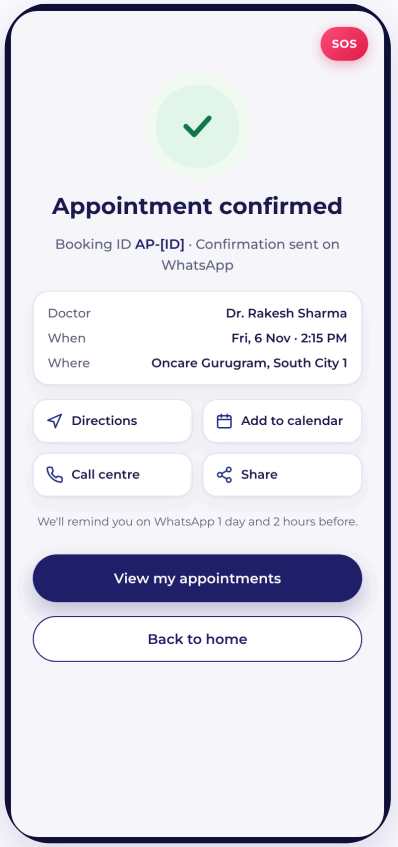

C2 · Choose doctor (next free slot shown)

C3 · Visit type, mode, date & slot

C4 · Review & confirm

C5 · Confirmed

Step 1 · Centre

- Tabs: Delhi NCR (5) / Bengaluru (4)
- Search by area or pincode; "Use my location"
- Nearest centre on top with distance

Step 2–3 · Doctor & slot

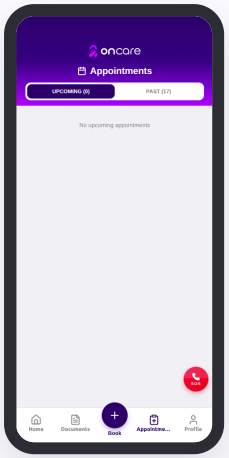

- Speciality chips; **next free slot** on each card
- First consultation / Follow-up; At centre / Video call
- Date strip; booked slots greyed and struck through

Step 4 · Confirm

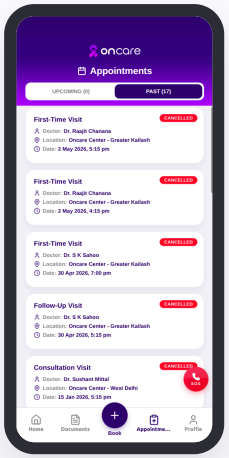

- Summary with "Edit details"
- Optional reason and reports (saved to Records)
- "Please bring" checklist; confirmation and reminders on WhatsApp (1 day and 2 hrs before)
- Confirmed: Directions · Add to calendar · Call centre · Share

08 Activity – appointments

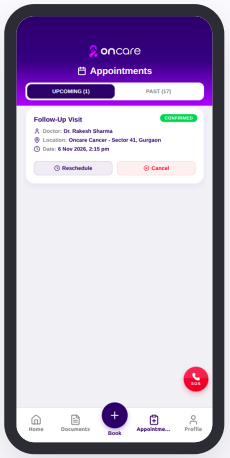

EXISTING APP

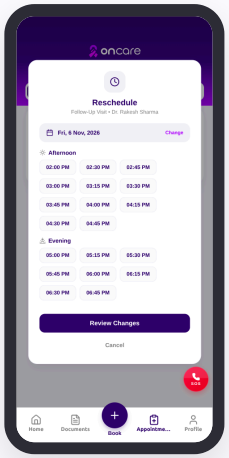

Upcoming (empty)

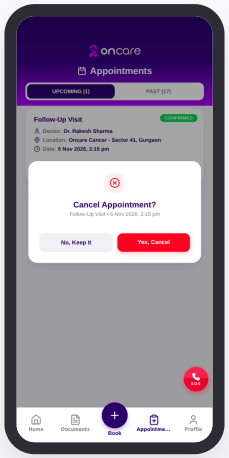

Past

Upcoming

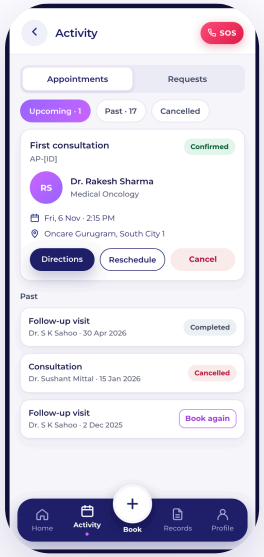

Reschedule

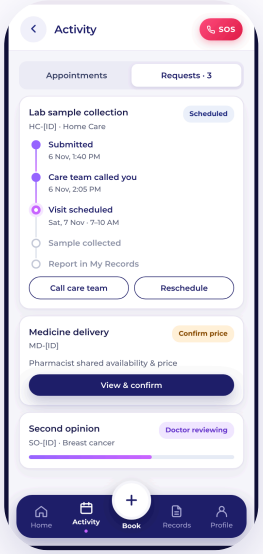

Cancel

NEW DESIGN

D1 · Activity – appointments

H3 · Activity – requests with live status

Existing

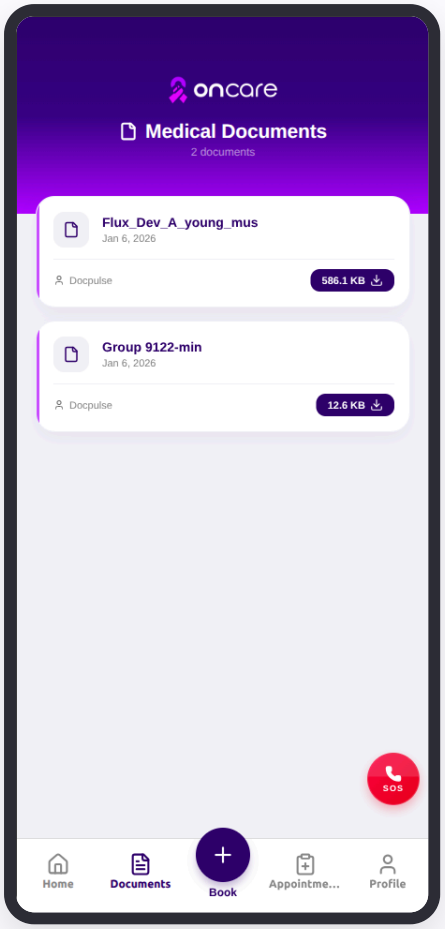

- Reschedule and Cancel work, with confirmation
- Location name differs from booking ("Sector 41, Gurgaon" vs "Oncare Cancer Centre, Gurugram")
- Past list is long, with no filters or "book again"

New

- One **Activity** tab with two views: Appointments | Requests
- Chips: Upcoming · Past · Cancelled
- Upcoming card: Directions · Reschedule · Cancel
- Past: status badge and **Book again**
- Requests view: live timeline (section 17)

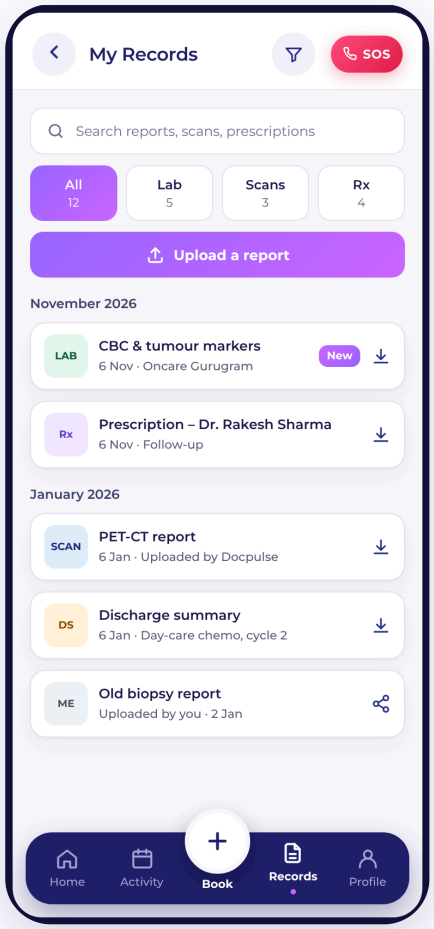

09 Records (documents)

EXISTING APP

Medical Documents

NEW DESIGN

D2 · Records (documents)

Existing

- Flat list showing raw file names ("Flux_Dev_A_young_mus", "Group 9122-min")
- No type, no search, no upload by patient

New

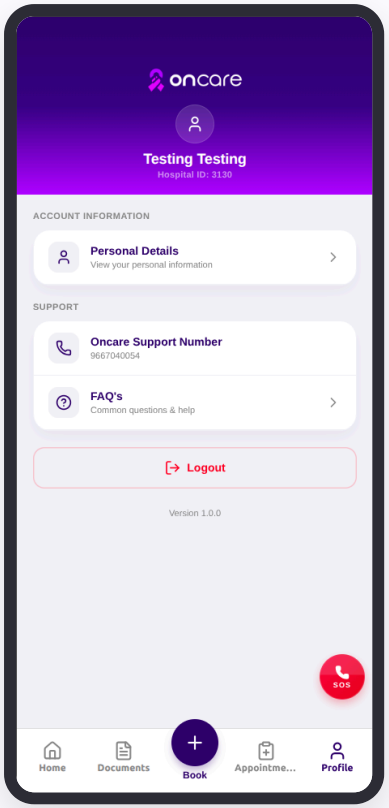

- Search; category chips **All · Lab · Scans · Rx** with counts
- Grouped by month; type badge (LAB, Rx, SCAN, DS, ME)
- Readable title + date + source ("Oncare Gurugram", "Docpulse", "Uploaded by you")
- **New** tag for unseen reports; download / share
- **Upload a report**: patient files are stored as "Uploaded by you"

Data rule

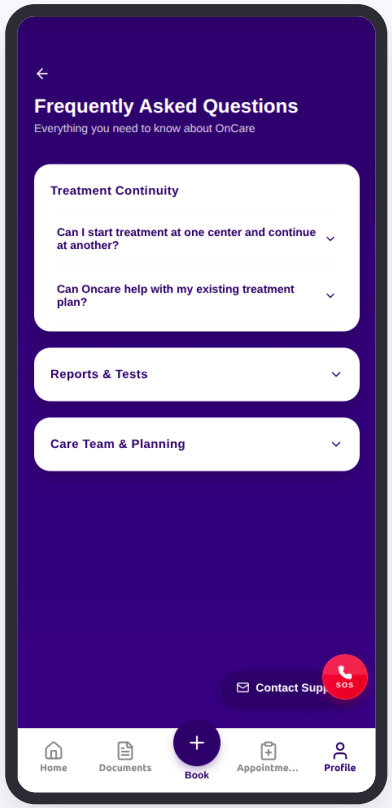

- Document type and title come from the HIS / Docpulse upload, not the file name

10 Profile & support

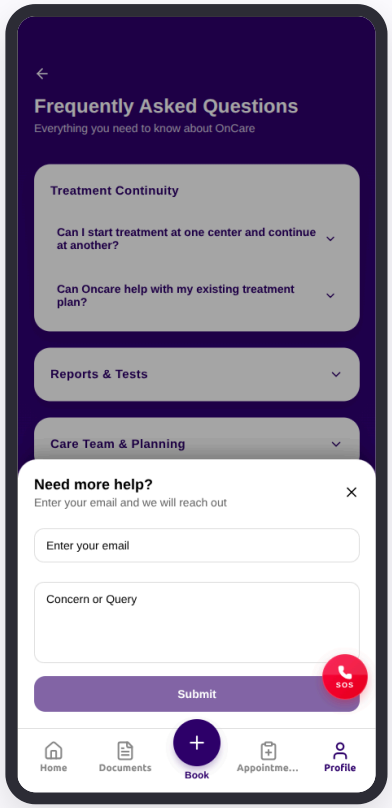

EXISTING APP

Profile

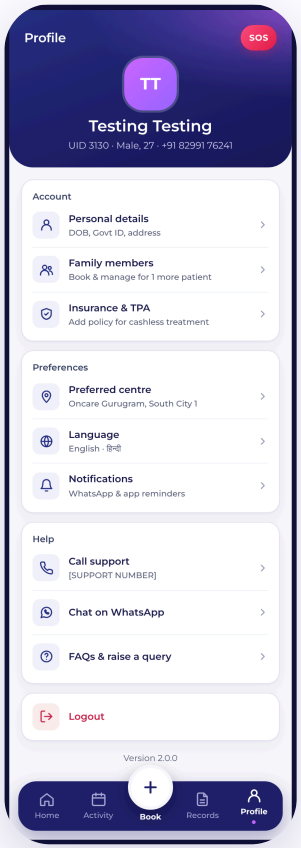

FAQ

Need more help?

NEW DESIGN

D3 · Profile

Existing

- Personal details, support number, FAQ, help form, logout
- Support number differs from the website – needs checking
- SOS button covers "Contact Support"

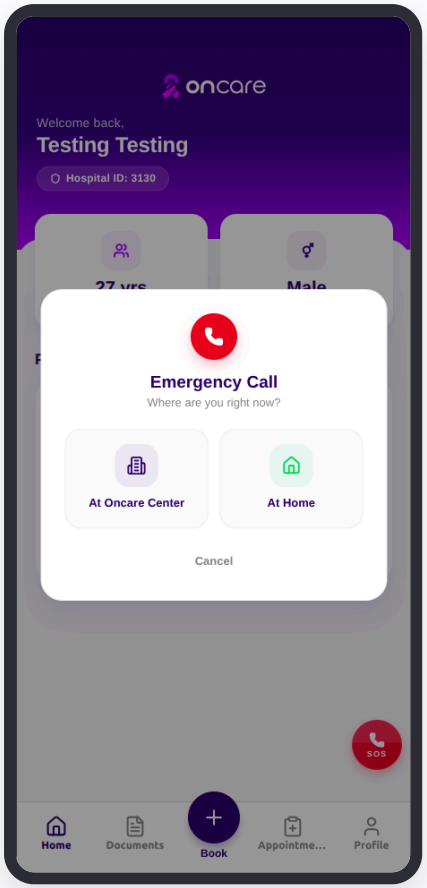

New

- **Account**: Personal details · Family members · Insurance & TPA
- **Preferences**: Preferred centre · Language (English / हिन्दी) · Notifications
- **Help**: Call support · Chat on WhatsApp · FAQs & raise a query
- Logout in red; app version

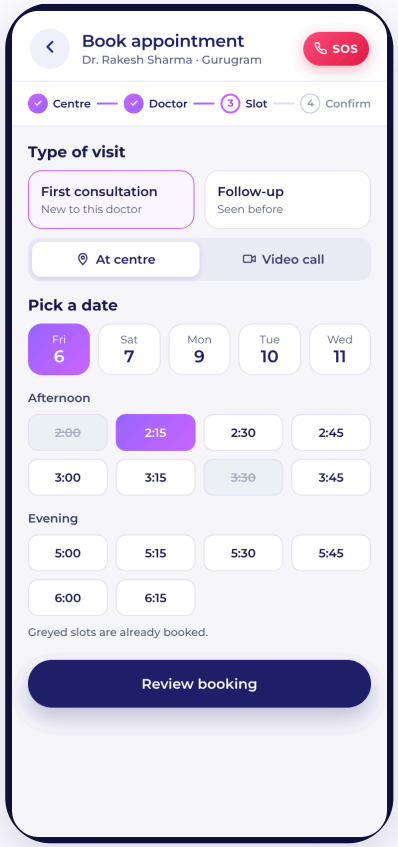

11 SOS on every screen

EXISTING APP

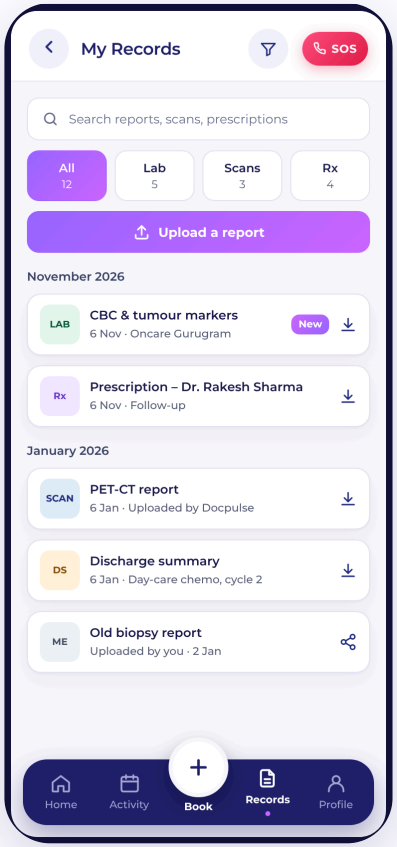

NEW DESIGN

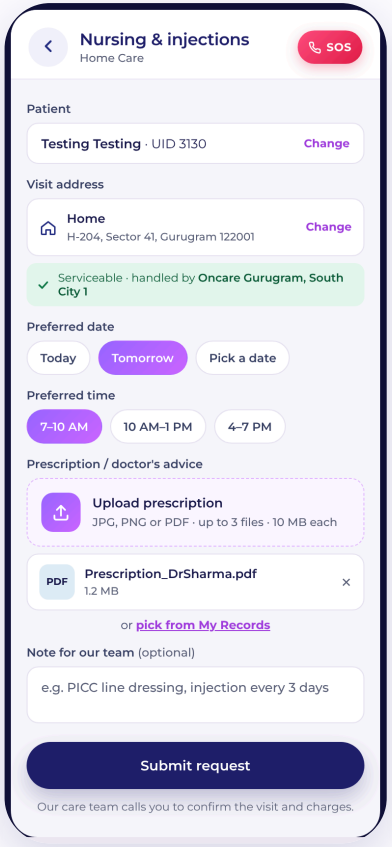

Emergency call

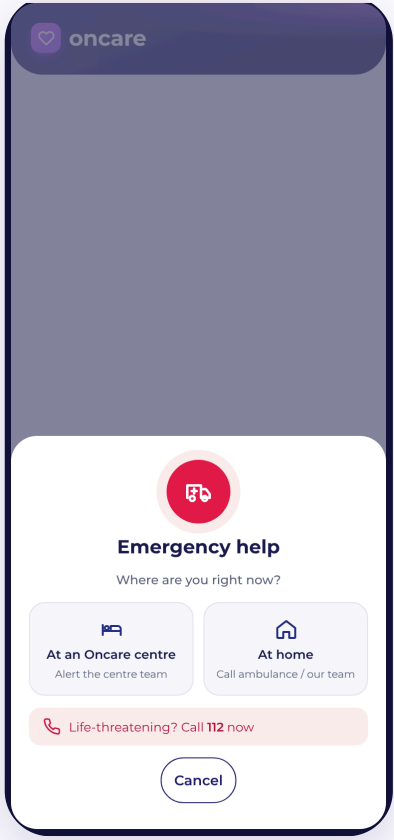

SOS in booking

SOS in Records

SOS in a form

Emergency sheet

Rule

- A red **SOS pill** sits in the top-right of **every** screen: login, all booking steps, tabs, forms, success screens
- It is part of the header, so it never covers buttons or form fields (the old floating button did)
- Works without login

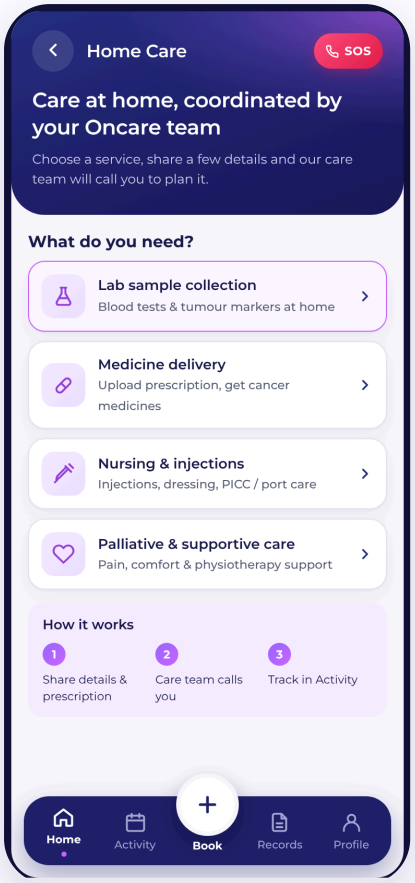

Emergency sheet

- "Where are you right now?" → **At an Oncare centre** (alerts the centre team) or **At home** (call ambulance / Oncare team)
- "Life-threatening? Call **112** now" line always shown
- Every SOS tap is logged on the Ops Dashboard with patient, time and option chosen

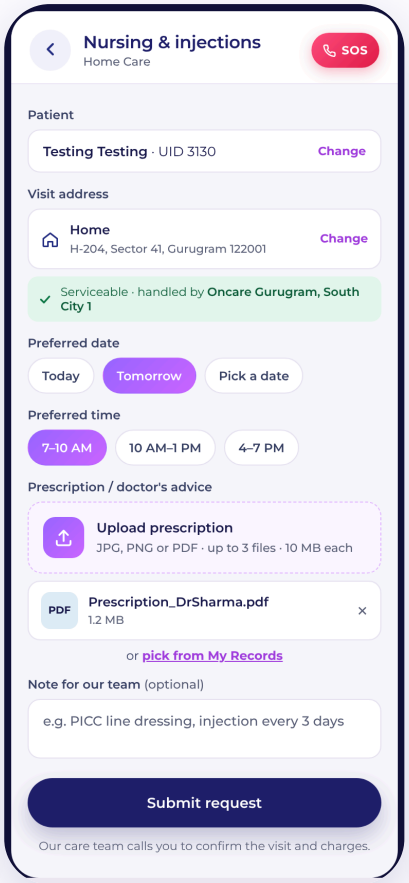

12 Home Care

New

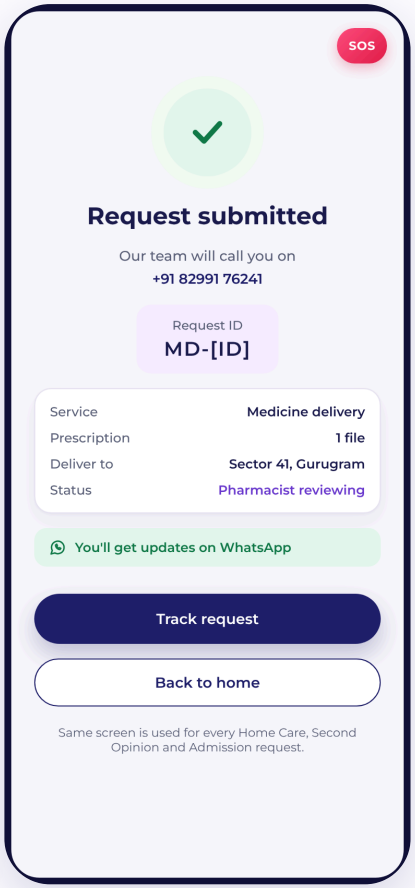

NEW DESIGN

E1 · Home Care – choose service

E2 · Nursing / palliative request form

E3 · Request submitted

Services and where they go

Service	Flow
Lab sample collection	Lab tests flow (section 14)
Medicine delivery	Medicine order flow (section 13)
Nursing & injections	Home Care form
Palliative & supportive care	Home Care form

Home Care form (nursing / palliative)

- Patient (auto-filled; can switch to a family member)
- Visit address + pincode → **serviceable check**, handling centre auto-mapped
- Preferred date (Today / Tomorrow / Pick) and slot (7–10 AM / 10 AM–1 PM / 4–7 PM)
- Prescription / doctor's advice: JPG/PNG/PDF, up to 3 files, 10 MB each, or pick from Records
- Optional note for our team

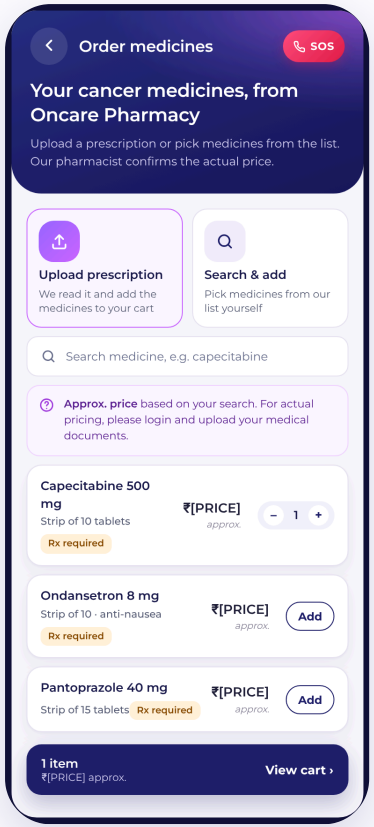

After submit

- Request ID (HC-…), WhatsApp confirmation, ticket on the Ops Dashboard
- Care team calls to confirm the visit and charges

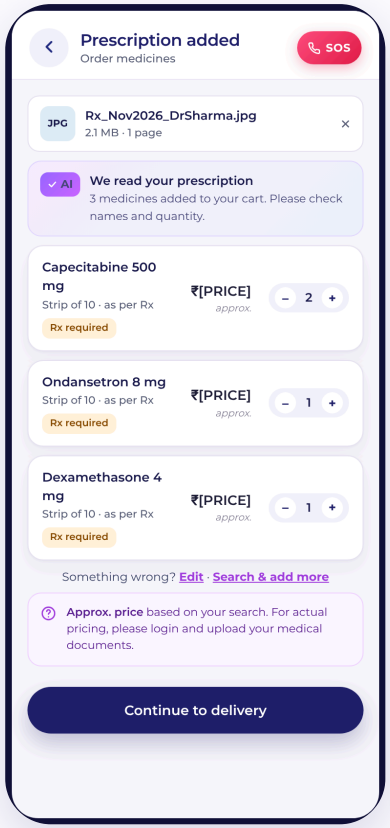

13 Medicine order

Upload prescription OR search & add → cart → delivery → send request

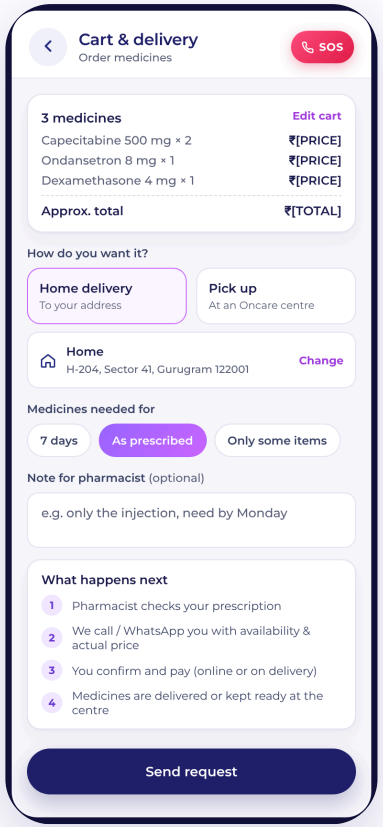

NEW DESIGN

F1 · Upload prescription or search & add

F2 · Prescription read → added to cart

F3 · Cart, delivery & send request

1

Patient chooses **Upload prescription** or **Search & add**

2

Upload: AI reads the prescription; the medicines are **added to the cart** automatically

3

Search: pick medicines from the list → **Add to cart**; quantity +/-

4

Cart: edit names / quantity; approx. price per item and approx. total

5

How do you want it? Home delivery or pick up at a centre + address

6

Medicines needed for (7 days / As prescribed / Only some items) + note for pharmacist

7

Send request → pharmacist checks, calls with actual price → patient confirms & pays → delivered

13 Medicine order – rules

Element	Rule
Prescription upload	Camera / gallery / PDF / from Records · up to 3 files · 10 MB each
AI reading	Medicine name, strength, quantity extracted; shown as "We read your prescription – please check"
Patient edits	Can change quantity, remove, or search & add more
"Rx required" tag	Shown on every prescription medicine
Prices	Every price is **approx.** with the standard note; actual price confirmed by pharmacist
Search-only orders	Allowed to add to cart; a prescription is still required before dispatch for Rx medicines
Removed	"Dispatched from … pharmacy" line is not shown

What happens next (shown on the cart screen)

- 1 · Pharmacist checks your prescription
- 2 · We call / WhatsApp you with availability & actual price
- 3 · You confirm and pay (online or on delivery)
- 4 · Medicines are delivered or kept ready at the centre

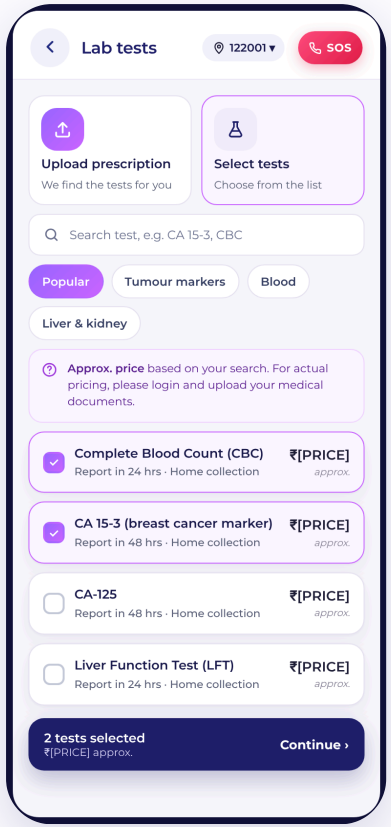

Ops Dashboard ticket

- Type: Medicine order (MD-…)
- Cart items as entered + AI-read lines flagged for pharmacist review
- Prescription files, delivery mode, address, "needed for", note
- Status: Submitted → Pharmacist reviewing → Price shared → Confirmed → Delivered / Ready for pick-up

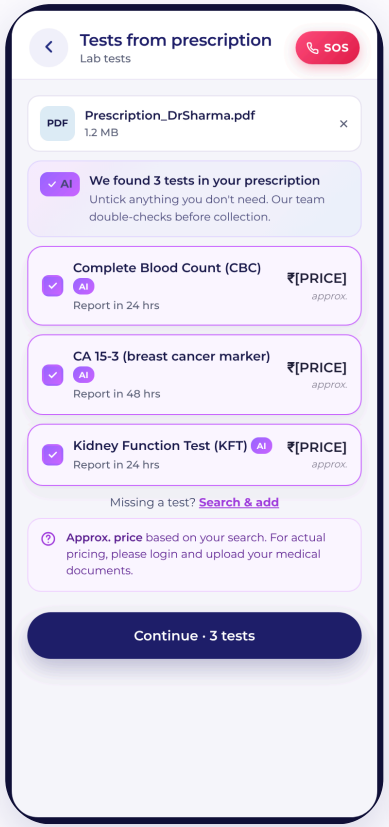

14 Lab tests

Select tests OR upload prescription (AI finds tests) → date & time → submit

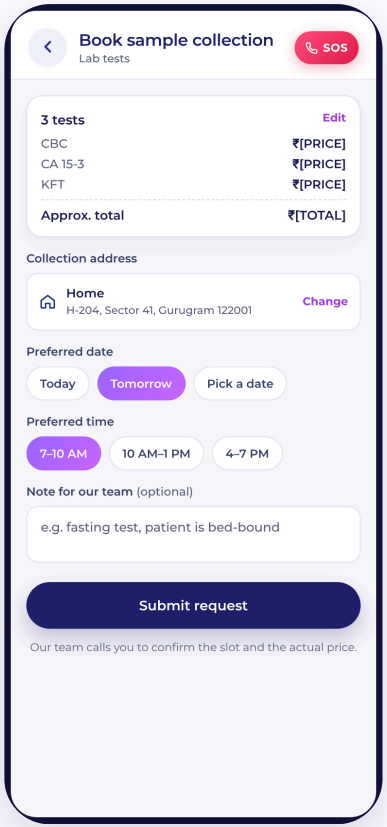

NEW DESIGN

G1 · Select tests or upload prescription

G2 · AI finds tests from prescription

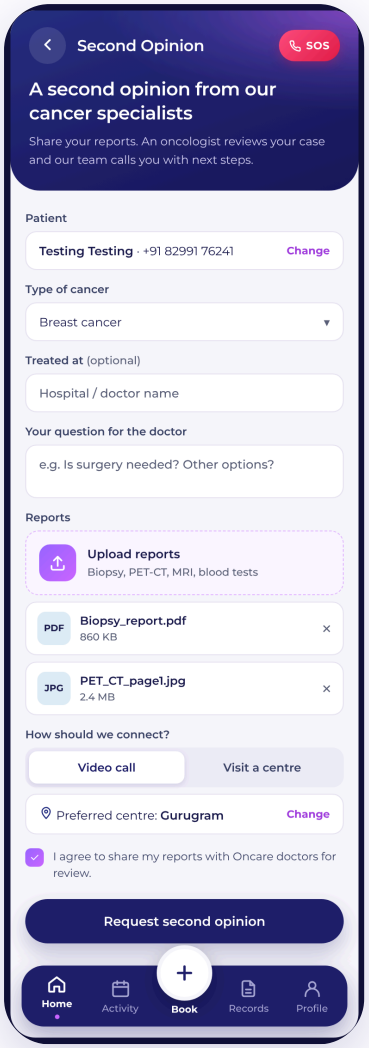

G3 · Date, time & submit

1. Pincode at top (prices & home collection depend on area)
2. Choose **Select tests** or **Upload prescription**
3. **Select:** search + chips (Popular, Tumour markers, Blood, Liver & kidney); tick tests
4. **Upload:** AI reads the prescription and shows the **test names** it found, all ticked; patient can untick or add
5. Review selected tests with approx. price and approx. total
6. Collection address, **preferred date & time**, **note for our team**
7. **Submit request** → team calls to confirm slot & actual price → sample collected → report in Records

15 Second Opinion

New

NEW DESIGN

H1 · Second Opinion

Fields

Field	Type
Patient + mobile	Auto-filled
Type of cancer	Dropdown
Treated at	Text, optional
Question for the doctor	Text
Reports	Upload: biopsy, PET-CT, MRI, blood tests
Connect via	Video call / Visit a centre
Preferred centre	Picker
Consent	Checkbox, required

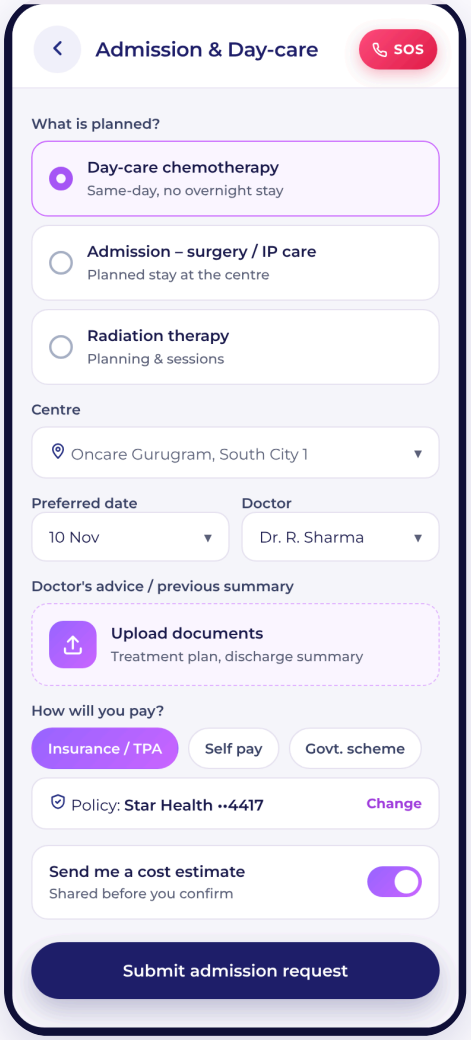

Flow

- Submit → SO-... request → Ops Dashboard
- Ops assigns an oncologist; status "Doctor reviewing"
- Team calls the patient with next steps; video or centre visit is booked
- Reports are saved to the patient's Records

16 Admission & Day-care

New – consultation-to-admission flow

NEW DESIGN

H2 · Admission & Day-care

Fields

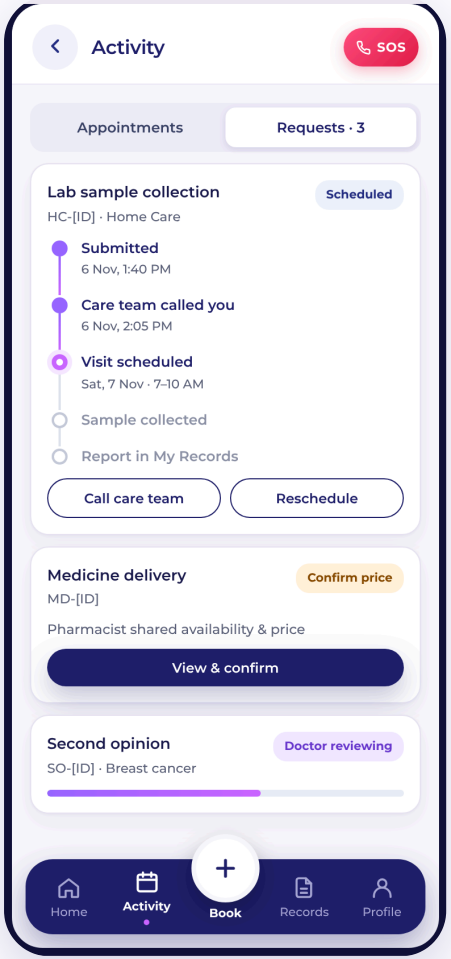

- What is planned: Day-care chemotherapy · Admission (surgery / IP) · Radiation therapy
- Centre, preferred date, treating doctor
- Upload doctor's advice / previous discharge summary
- Payment: Insurance / TPA · Self pay · Govt. scheme; saved policy shown
- "Send me a cost estimate" toggle

Status steps

Step	Who
Requested	Patient
Estimate shared	Ops / billing
Insurance pre-auth (if TPA)	Ops / TPA desk
Scheduled	Centre
Admitted / Day-care done	Centre
Discharge summary in Records	Centre

17 Request tracking & Central Ops Dashboard

NEW DESIGN

H3 · Activity – requests with live status

Patient app
Home Care · Medicines · Lab · Second Opinion · Admission · Guest call back · SOS

→

Central Ops Dashboard
Ticket created

→

Ops team
Calls, assigns, confirms price

→

Patient
Activity + WhatsApp

Ticket fields

Field	Example
Request ID	HC-... / MD-... / SO-... / AD-... / CB-...
Type & sub-type	Home Care → Lab sample
Patient	Name, UID, mobile (or guest lead)
Centre	Auto from pincode / chosen
Files	Prescriptions, reports
Preferred date / slot	Sat 7 Nov, 7–10 AM
Owner	Ops agent assigned
Status + notes	Timeline, call notes, price

Status (shared by all types)

Submitted → Called → Scheduled / Price shared → In progress → Completed · or Closed with reason

- Every status change pushes an in-app update + WhatsApp message
- Status shown in Activity → Requests with a timeline

18 Issues found in the existing app

Fix these during the rebuild

#	Issue	Where	Fix
1	Console errors: "Unexpected text node: A text node cannot be a child of <View>" (40+)	Login, Home	Wrap stray text / spaces in <Text>; remove conditional "" renders
2	Deprecated style props: shadow*, pointerEvents, resizeMode	All	Use boxShadow, style.pointerEvents, props.resizeMode
3	"Invalid DOM property transform-origin"	Web build	Use transformOrigin
4	useNativeDriver not supported on web; DateTime Picker not supported on web	Appointments, Book	Platform checks; web date picker fallback
5	Centre name differs between booking and appointment card	Book → Appointments	One centre master (name, short name, address)
6	Booking centre list differs from the website (JP Nagar, Varthur vs Basavanagudi, Whitefield, Rajajinagar)	Book	Confirm the final 9-centre list
7	"15+ Years years of experience" duplicated text	Doctor profile	Template fix
8	Floating SOS covers "Review Appointment" and "Contact Support"	Book, FAQ	Move SOS into the header (section 11)
9	Documents show raw file names	Documents	Use document type + title from HIS
10	Support number in app (9667040054) differs from website (+91 96679 40053)	Profile	Confirm the correct number
11	Booked slots not marked unavailable	Book · slot	Grey out and disable booked slots

19 Open items to confirm

Item	Owner	Needed for
Final list and addresses of the 9 centres; serviceable pincodes per centre	Ops	Booking, Home Care, Medicines
Home Care services offered (lab, medicines, nursing, palliative) and charges	Ops / Medical	Home Care
Lab test master with approx. prices and TAT, per city	Lab	Guest prices, lab booking
Pharmacy price list (approx.) and medicines allowed for delivery	Pharmacy	Medicine prices / order
Payment options: online gateway, pay on delivery, insurance / Govt. schemes	Finance	Medicines, Admission
Central Ops Dashboard: who owns tickets, SLA per request type	Ops	All requests
WhatsApp templates for each status update	Marketing / Ops	Notifications
Correct support number and SOS escalation numbers per centre	Ops	Profile, SOS
NMC advertising guidelines check for in-app copy and doctor profiles	Marketing / Legal	All content
Logo asset (SVG) to replace the placeholder mark	Design	All screens

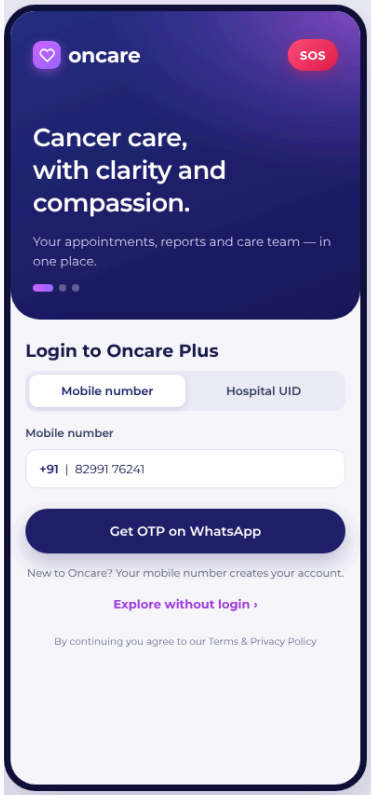

Placeholders used in the screens: ₹[PRICE], request IDs [ID], [SUPPORT NUMBER], sample doctor slots and policy number.
